Sydney Water Selects EGL for Richmond Upgrade

The Environmental Group Limited (ASX: EGL) has been awarded a contract to design, supply and install a biological odour control system for Richmond, N.S.W. by Sydney Water.

Biological scrubbing systems are becoming more common in the sewage treatment industry. Generally speaking, the technology uses microscopic bacteria to break down the compounds that cause odours and are environmentally friendly. This will be the second biological scrubbing system for EGL. There is potential for more installations as the technology gains acceptance.

The contract will generate approximately \$0.5 million in revenue to EGL and is scheduled for delivery by November 2009. This contract is of significance given the stature of Sydney Water as a major water and waste water provider of world standing.

Acceptance of EGL's solution is recognition of EGL's position as a leading supplier of advanced technologies for gas and particulate control systems in Australia, and of the professional approach and quality management systems that EGL strives to provide to its customers.
