EGL WINS SOLVENT RECOVERY UNIT ORDER

The Environmental Group Limited (ASX: EGL) has been awarded a contract by Bovis Lend Lease for the design and supply of a Solvent Recovery Unit at Mulwala, N.S.W. This facility creates value by recovering useable solvent from a waste air-stream. This award is in addition to the previous contract announced in February this year.

Bovis Lend Lease is designing, constructing and commissioning this project as prime contractor on behalf of the Department of Defence. Mulwala is situated on the Murray River, approximately 100 kms west of Albury.

The revenue the contract will generate to EGL is approximately \$1.6 million and is scheduled for delivery by August 2009. The Mulwala order takes EGL's Gas & Vapour Division's order intake to in excess of \$10 million since the beginning of the 2008 /09 financial year.

Acceptance of EGL's solution is recognition of EGL's position as a leading supplier of advanced technologies for gas and particulate control systems in Australia, and of the professional approach and quality management systems that EGL strives to provide to its customers.
